BBZ am Nord-Ostsee-Kanal Europaschule

People and jobs in IT IT024

Today computers are everywhere you turn - not only in office jobs, but also in engineering, production, entertainment, and many more. In fact, it is hard to imagine working in a job that does not use a computer at some point. Despite this, only a small majority of computer users can be called experts, and an even smaller number of people understand what happens behind the screen. It takes IT experts to create and service the machines and applications that so many people depend on. And these experts need to have a wide range of qualifications and skills to provide the quality and support necessary.

1. **Your colleague would like to learn about people and jobs in IT. Unfortunately, he doesn't understand the text above because it's in English. Rewrite the text for your colleague in German.**

2. **Discuss with your partner what the job responsibilities, skills and requirements for each of the jobs above might be. Can you describe other jobs in IT?**

3. **Write a short paragraph in which you describe your job, the necessary qualifications, skills and requirements.**

M.Bechmann SJ 2024/25

BBZ am Nord-Ostsee-Kanal Europaschule

People and jobs in IT

IT024

1 Who says what? Match the texts (1–4) with the jobs (a.–d.).

a. IT Consultant	c. Network Administrator
b. Computer Programmer	d. Web Developer

"My main task is to look for ways of applying IT to business processes. To do this, I have to keep up to date with new technical developments and trends. I also have to advise my clients on their different options, about the costs, benefits and risks of my suggestions as well as about their impact on other parts of the business. I need a thorough education in Computer Science and Business along with strong analytical and communication skills, both verbal and written. I must be good at presentations, too." 1

a

"I design and develop websites for companies, and I integrate SQL Server databases into them. My focus lies on design and functionality. I also assist the head of the company in developing the overall company strategy with regard to web performance. I need to know a lot about programming, including several programming languages, and a lot about databases. Of course, it also helps to have skills in graphic design, and an eye for detail." 2

d

c

"Mostly, I install, upgrade and troubleshoot networks, both hardware and software. Another aspect of my work is the maintenance of our LAN/WAN, for which I recommend, schedule and execute repairs. I need strong analytical and communication skills. I work alone or in a team, and much of the information or material I handle is confidential. A broad education in IT systems and several internationally recognized certificates have helped me in my career." 3

b

"What I mostly do is develop new applications, from the first idea right through to their implementation, but I also maintain and update existing programs. Another focus lies on innovating data visualisation and presentation techniques. For my work I must be able to apply technical standards, theories and techniques. Also, I must have some experience in database systems and programming languages, along with problem solving capabilities and both verbal and written communication skills." 4

2 Read the four texts again and make a list in German outlining the responsibilities, skills and qualifications required for each job.

Beruf	Zuständigkeiten	Fertigkeiten	Qualifikationen

3 Search the Internet. Find information about other jobs in IT, e.g. systems analyst. Use the table above and report your findings to the class.

4 Choose one of the jobs without telling your partner. Your partner asks (Yes-/No-) questions to find out your job title. Then swap roles.

Example: "Do you normally work in a team?" "Yes, I do."

WORD BANK

database – Datenbank
IT consultant – IT-Berater(in)
LAN – lokales Netzwerk
network – (Computer)netzwerk
network administrator – Netzwerkadministrator(in)
programmer – Programmierer(in)
systems analyst – Systemberater(in)
WAN – Weitverkehrsnetz
Web Developer – Webentwickler(in)
website – Internetseite

M.Bechmann SJ 2024/25

Paperclip

Montag, 17. November 2025 11:56

Einheit, Auftrag, Mittel, Ziel, Weg
This introduction is adressed for all people that want to fold a paperclip.
For the process you need just one paper as the material and optionally one little strap.

First you fold the paper in the halve horizontly.
Then you fold both corner at the top to the middle and turn the paper to the other side.
After that you fold the big triangle at the top to the front so the tip touches the middle of the paper. Next you fold the left and the right corner to the middle edge and turn the paper to the other side. After that you fold the paper with the tip in half.
Now you fold the square with the triangle in half too and repeat this process with the other side.
*Optionally you can glue a little strap at the bottom to stabilize the paperclip

	Past	Present	Future
Simple **(time clue)***	*An action that ended at a point in the past.*	*An action that exists, is usual, or is repeated.*	*A plan for future action.*
	cooked	**cook / cooks**	**will cook**
	e.g. He cooked yesterday.	e.g. He cooks dinner every Friday.	e.g. He will cook tomorrow.
Continuous **be + main verb +ing** **(time clue)***	*An action was happening (past progressive) when another action happened (simple past).*	*An action that is happening now or a plan for future action.*	*An action that will be happening over time, in the future, when something else happens.*
	was / were cooking	**am / is / are cooking**	**will be cooking**
	e.g. He was cooking when the phone rang.	e.g. He is cooking now.	e.g. He will be cooking when you come.
Perfect **have + main verb** **(time clue)***	*An action that ended before another action or time in the past.*	*An action that happened at an unspecified time in the past.*	*An action that will end before another action or time in the future.*
	had cooked	**has / have cooked**	**will have cooked**
	e.g. He had cooked the dinner when the phone rang.	e.g. He has cooked many meals.	e.g. He will have cooked dinner by the time you come.
Perfect Continuous **have + be + main verb + ing** **(time clue)***	*An action that happened over time, in the past, before another time or action in the past.*	*An action occurring over time that started in the past and continues into the present.*	*An action occurring over time, in the future, before another action or time in the future.*
	had been cooking	**has / have been cooking**	**will have been cooking**
	e.g. He had been cooking for a long time before he took lessons.	e.g. He has been cooking for over an hour.	e.g. He will have been cooking all day by the time she gets home.

Simple Present	
Singular	Plural
I am	We are
You are	You are
He, She, It is	They are

Simple Past	
Singular	Plural
I was	We were
You were	You were
He, She, It was	They were

Simple Present Progressive	
Singular	Plural
I am being	We are being
You are being	You are being
He, She, It is being	They are being

Simple Past Progressive	
Singular	Plural
I was being	We were being
You were being	You were being
He, She, It was being	They were being

Simple Future Will	
Singular	Plural
I will be	We will be
You will be	You will be
He, She, It will be	They will be

Simple Future Going To	
Singular	Plural
I am going to be	We are going to be
You are going to be	You are going to be
He, She, It is going to be	They are going to be

Present Prefect	
Singular	Plural
I have been	We have been
You have been	You have been
He, She, It has been	They have been

Past Perfect	
Singular	Plural
I had been	We had been
You had been	You had been
He, She, It had been	They had been

Future Perfect will	
Singular	Plural
I will have been	We will have been
You will have been	You will have been
He, She, It will have been	They will have been

Future Perfect Going To	
Singular	Plural
I am going to have been	We are going to have been
You are going to have been	You are going to have been
He, She, It is going to have been	They are going to have been

In following tenses, the progressive form only changes the verb the form of to be is not affected.

Future Progressive: I will be doing / He will be doing.

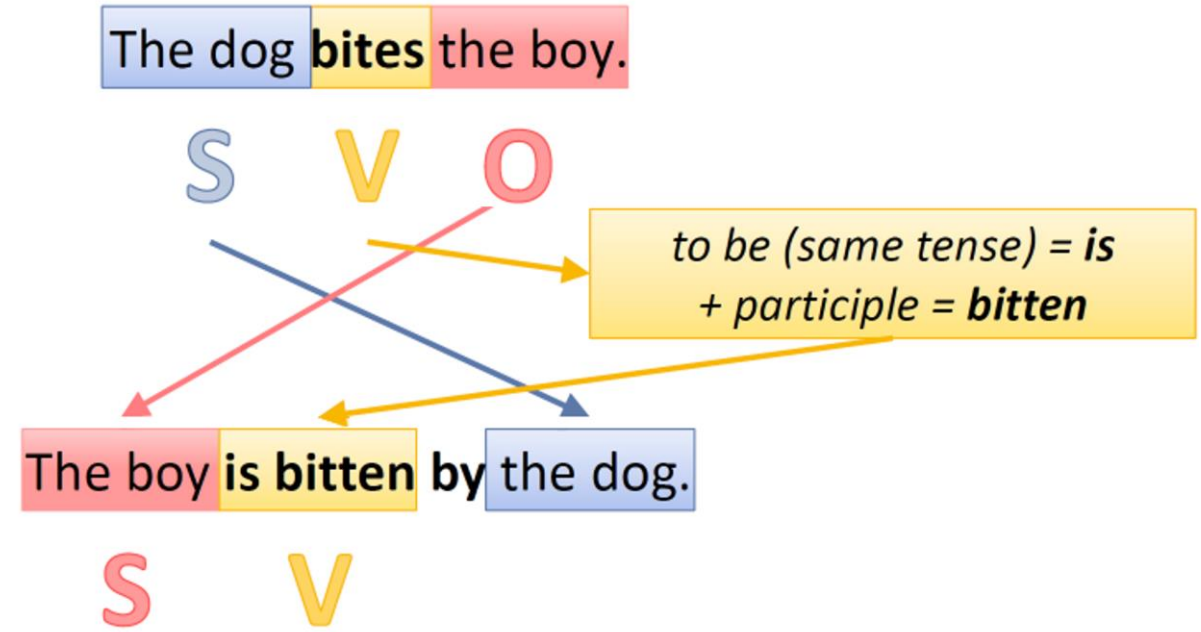

Present Perfect Progressive: I have been doing / He has been doing.

Past Perfect Progressive: I had been doing / He had been doing.

Future Perfect Progressive: I will have been doing / He will have been doing.

Forming the passive

Same tense of ***to be*** + ***participle*** of original verb

Task: Identify and highlight the verb, including its tense, in the given sentence. State the correct tense and then rewrite the sentence in the passive voice.

1. George had repaired many cars before he received his mechanic's license.
   Many cars were
2. Sally is going to make a beautiful dinner tonight.
3. Recently, John has been doing the work.
4. Once a week, Tom cleans the house.
5. Someone will finish the work by 5:00 PM.
6. At 8:00 PM tonight, John will be washing the dishes.
7. Many tourists have visited that castle.
8. The famous artist will have been painting the mural for over six months by the time it is finished.
9. The salesman was helping the customer when the thief came into the store
10. At 8:00 PM tonight, John is going to be washing the dishes.
11. Chef Jones had been preparing the restaurant's fantastic dinners for two Years.
12. Right now, Sarah is writing the letter.
13. Sam repaired the car.
14. They will have completed the project by the time you arrive.
15. They are going to have completed the project by the time you arrive.
16. The famous artist is going to have been painting the mural for over six months by the time it is finished.

löse dir jede Nummer: Verb + Zeitform + Satz im Passiv.

1. George had repaired many cars before he received his mechanic's license.
→ Verb/Zeit: had repaired – past perfect.
→ Passiv: Many cars had been repaired before he received his mechanic's license.

2. Sally is going to make a beautiful dinner tonight.
→ Verb/Zeit: is going to make – future with going to.
→ Passiv: A beautiful dinner is going to be made tonight.

3. Recently, John has been doing the work.
→ Verb/Zeit: has been doing – present perfect continuous (kein echtes Passiv möglich, man nimmt Simple Present Perfect).
→ Passiv (Ersatzform): The work has been done recently.

4. Once a week, Tom cleans the house.
→ Verb/Zeit: cleans – simple present.
→ Passiv: The house is cleaned once a week

5. Someone will finish the work by 5:00 PM.
→ Verb/Zeit: will finish – simple future.
→ Passiv: The work will be finished by 5:00 PM.

6. At 8:00 PM tonight, John will be washing the dishes.
→ Verb/Zeit: will be washing – future continuous (formal kaum im Passiv, oft Simple Future Passive als Ersatz).
→ Passiv (Ersatzform): The dishes will be washed at 8:00 PM tonight.

7. Many tourists have visited that castle.
→ Verb/Zeit: have visited – present perfect.
→ Passiv: That castle has been visited by many tourists.

8. The famous artist will have been painting the mural for over six months by the time it is finished.
→ Verb/Zeit: will have been painting – future perfect continuous (kein Passiv möglich).
→ Hinweis: Diese Zeitform bildet man normalerweise nicht im Passiv, also kein natürliches Passiv.

9. The salesman was helping the customer when the thief came into the store.
→ Verb/Zeit: was helping – past continuous.
→ Passiv: The customer was been being helped when the thief came into the store.

10. At 8:00 PM tonight, John is going to be washing the dishes.
→ Verb/Zeit: is going to be washing – future continuous (going to).
→ Passiv (Ersatzform): The dishes are going to be being washed at 8:00 PM tonight.

11. Chef Jones had been preparing the restaurant's fantastic dinners for two years.
→ Verb/Zeit: had been preparing – past perfect continuous (kein Passiv).
→ Natürliche Umschreibung: The restaurant's fantastic dinners had been being prepared by Chef Jones for two years. (Grammatikalisch eher past perfect, nicht wirklich continuous.)

12. Right now, Sarah is writing the letter.
→ Verb/Zeit: is writing – present continuous.
→ Passiv: The letter is being written right now.

13.Sam repaired the car.
→ Verb/Zeit: repaired – simple past.
→ Passiv: The car was repaired.[englishwithashish +1]
14.They will have completed the project by the time you arrive.
→ Verb/Zeit: will have completed – future perfect.
→ Passiv: The project will have been completed by the time you arrive.[Anhang +1]
15.They are going to have completed the project by the time you arrive.
→ Verb/Zeit: are going to have completed – future perfect (going to).
→ Passiv: The project is going to have been completed by the time you arrive.[Anhang +1]
16.The famous artist is going to have been painting the mural for over six months by the time it is finished.
→ Verb/Zeit: is going to have been painting – future perfect continuous (kein Passiv).[studyandexam]

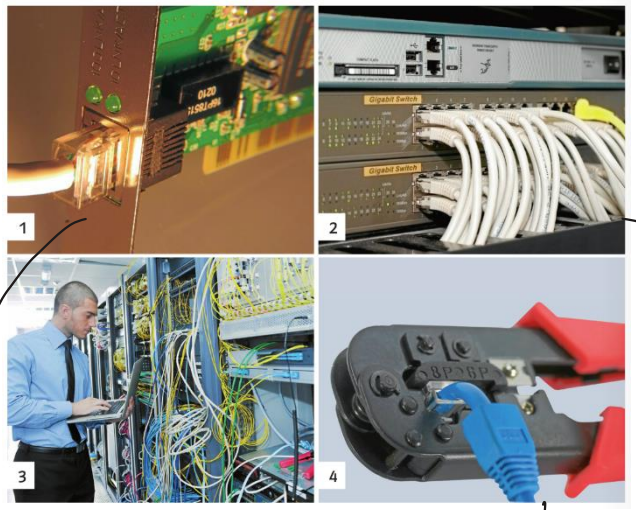

video

good.

should be improved: not waiting so much, more tidily.

Networks

The term 'network' is not only used in computer technology, but it has also become a synonym for a 'computer network'. A network can interconnect a number of computers or even devices like smartphones. The purpose of a network is to share resources, e.g. data storage, Internet access, printers or services.

Task 1: Match the words in the box with the photos.

crimping tool • network interface card (NIC) • server room • network switch

Task 2: Put the jumbled descriptions into the correct order. Then match the descriptions with the words in exercise 1.

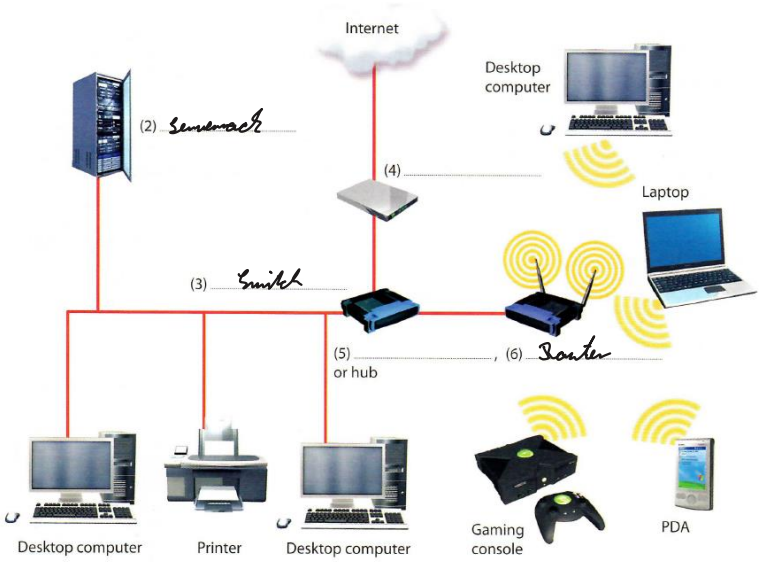

Serverroom 1. room • a server • multiple servers • houses. The • protection system • is • air conditioned • room • has • and often • a fire

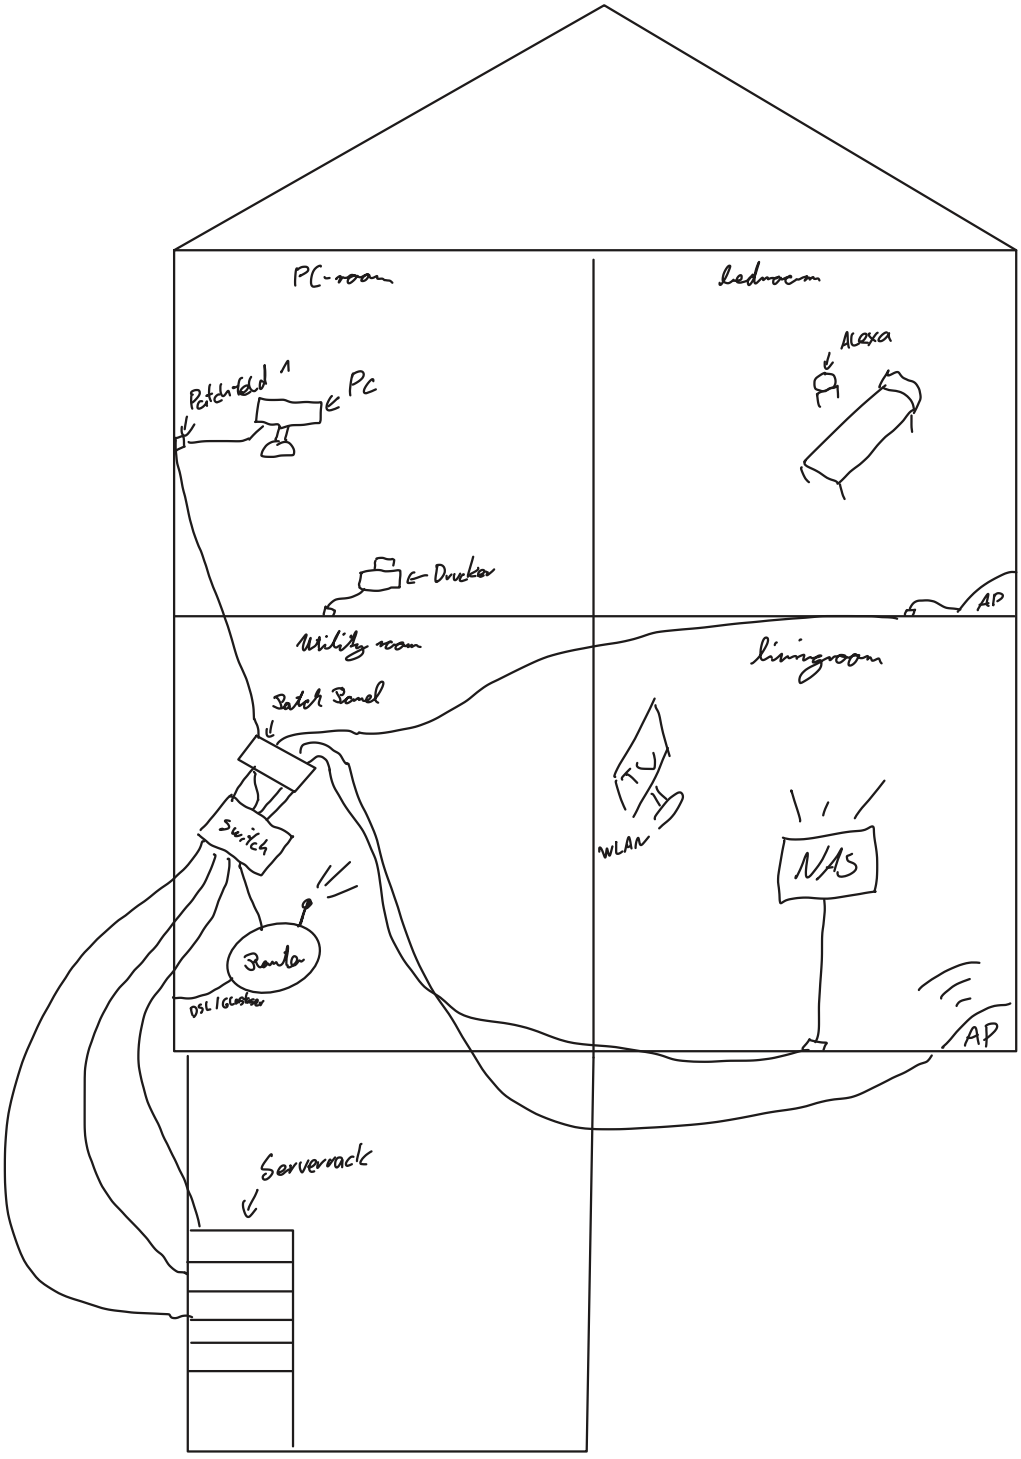

network switch 2. device • this • interconnects • other network devices • various. 256 cables • it • ports • can easily have • for up to - this device int

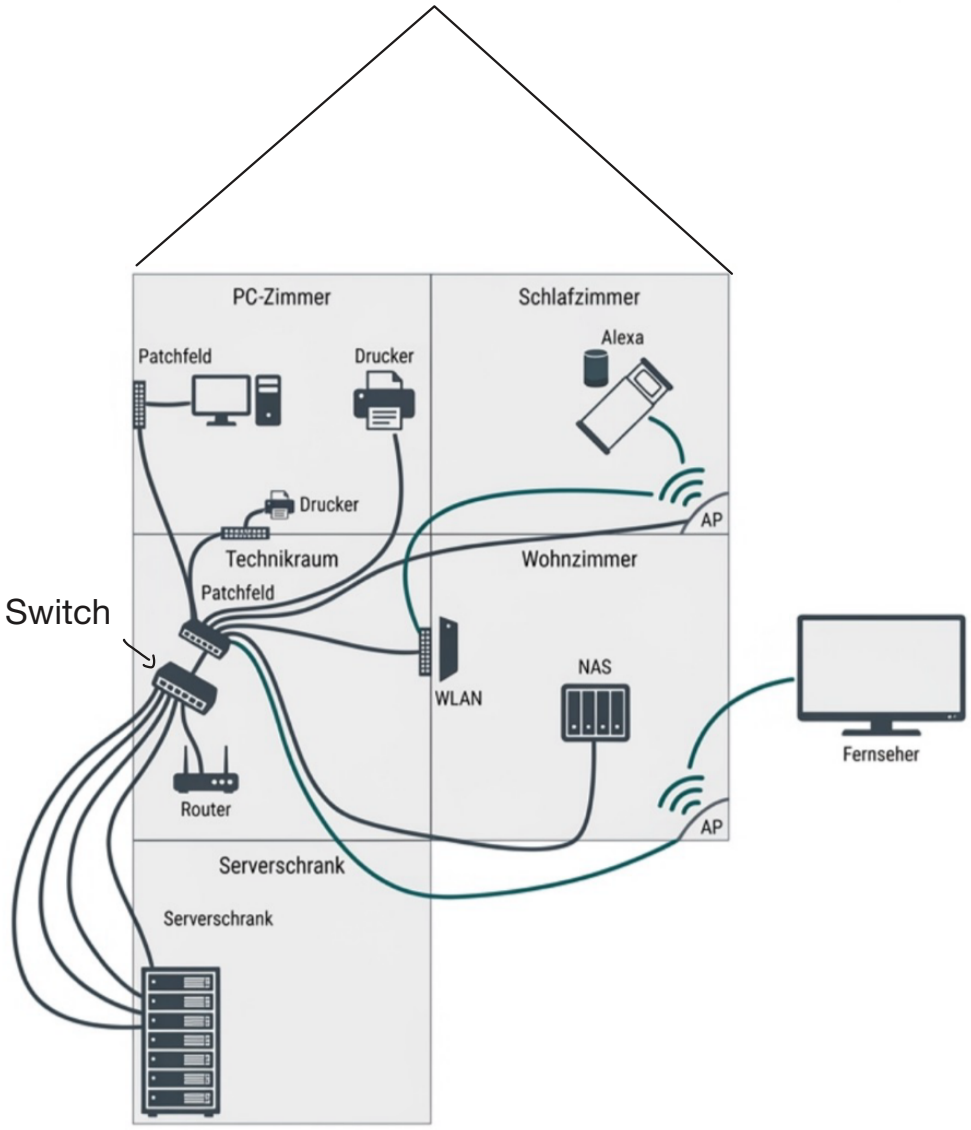

network interface card 3. this • your • computer's or server's • is • if • broken • built-in connection • network • can • you • install if this built-in connection is broken your computer or server's

crimping tool 4. tool • this is • a • for • network • crimping • your own • cable
this is a tool for crimping your own network cable

Task 3: Name the network components in the figure below. Explain the function of each component

PC-room
bedroom
Alexa
Patch-field
PC
Drucker
AP
Utility room
livingroom
Patch Panel
TV
WLAN
Switch
NAS
Router
DSL / Glasfaser
AP
Serverrack

PC-Zimmer
Schlafzimmer
Patchfeld
Drucker
Alexa
Drucker
AP
Technikraum
Wohnzimmer
Patchfeld
Switch
WLAN
NAS
Fernseher
Router
AP
Serverschrank
Serverschrank

Task 4: Look at the FAQs (a-f) without reading the whole text. In pairs, try to answer as many of the questions as you can.

Task 5: Read the whole text and answer these questions.

- What does PAN stand for?
- What is a network protocol?
- How do you log on to an Internet Service Provider?
- WiMAX is a type of wireless network. What is it used for?
- What equipment do you need to set up a wireless LAN?
- What are the advantages and disadvantages of wireless networks?

Task 6: The text below is out of date. Find the corresponding passages and bring them up to date.

Network FAQ

a) How many types of network are there?
Networks are classified according to different criteria:
Geographical area: PANs (Personal Area Networks) typically include a laptop, a mobile phone and a PDA; LANs cover a building; MANs (Metropolitan Area Networks) cover a campus or a City; WANs (Wide Area Networks) cover a country or a continent.
Architecture: In a client-server network, a computer acts as a server and stores and distributes information to the other nodes, or clients. In a peer-to-peer network, all the computers have the same capabilities — that is, share files and peripherals without requiring a separate server computer.
Topology, or layout: In a bus network, all the computers are connected to a main cable, or bus. In a star network, all data flows through a central hub, a common connection point for the devices in the network. In a ring network, all devices are connected to one another in a continuous loop, or ring.
Network protocol: This is the language, or set of rules, that computers use to communicate with each other. Networks use different protocols. For instance, the Internet uses TCP/IP.

b) How do I install a wired modem router?
A modem router is a device that connects your computer or home LAN to the Internet.
Plug one end of the phone cord directly into a phone jack, and the Other end into the ADSL port on the router.
Plug one end of the Ethernet Cable into your computer's network port and the other end into an Ethernet port on the router.
Turn on your computer. To set up, or configure, the router, you'll need to input some parameters, for example your ISP's name and phone number.
NOTE: A router has various Ethernet ports, so you can connect various PCs to the router via Ethernet cables. If you already have a hub or switch connecting a LAN, you only need one cable to connect the hub to the router.

c) How do I log on to the Internet Service Provider?
You need to type in your username and password. Once you are online, you can get email, look for information on the Web, look up IT words in dictionaries, try out new software, and sign up for RSS feeds, newsletters, etc. It is important that you remember to log off after using the Internet. An open line increases the risk of viruses, and hackers might break into your computer to steal confidential data.

d) What is wireless networking?
Wired networks are linked by Ethernet cables, phone lines and high-speed fiber optic cables. Wireless networks, however, use electromagnetic waves, such as radio waves, to transmit data. These are the main types of wireless networks:
Satellites — for long distances
WiMAX — for connecting Wi-Fi hotspots
Wi-Fi — for medium-range distances
Bluetooth — for Short distances
GSM — for mobile phones

e) What do I need to set up a home wireless LAN?
You'll need computers equipped with a wireless adapter or wireless card, a wireless access point (a wireless router) and a broadband internet connection.

f) Which is better, a wired or wireless LAN?
Wired LANs are more difficult to install, but they are cheaper, faster and more reliable. Wireless networks let you move, or roam, from one access point to another, but they are less secure and subject to interference.

Task 6: There are three network topologies mentioned in the text. Create a table that contains the following information:

- a sketch of the topology
- a short description
- the advantages and disadvantages of the particular topology

Add the tree topology and the mesh topology to the table.

Point-to-Multipoint

- multiple hosts are connected by a central system
- hosts share one line

advantages:
- one distributor more receivers
- cost efficiency - one base, less hardware
- administration
- scalability - easy to add users

disadvantages:
- shared bandwidth
- more devices can cause more interconnection
- high latency
- disturbed by other frequencies
- more planning
- single point of failure

Parts of an Argument

Part	Example	Explanation
Claim	"It is going to rain later today." (weather forecast)	(topic+ assertion)
Evidence	Just look at those huge black clouds on the eastern horizon.	Evidence supports your claim; it is the reason to accept the assertion.
Warrant	Dark clouds hold lots of water, which falls to earth.	A warrant explains how or why the evidence is linked to the claim.
Backing	Up here on the coast, dark clouds always mean heavy rains. While most smaller weather fronts come from the west, our really heavy storms come in from the east.	MORE, secondary evidence, expanded warrants, details *"help critical thinkers to think more"*
Rebuttal	*The weather forecaster on national TV said there's only a slight chance of rain,* *but he is based in Berlin.* *We up here in the north know about these kinds of dark eastern coastal clouds.*	anticipate counterarguments (counter-claims) say what is wrong about them *(but be tactful)*
Concession & Qualification	*Of course, it could blow over the city and not rain in Flensburg, but it will certainly pour somewhere nearby.* *If winds stay light, the rain might be delayed until after supper, but we are bound to get soaked eventually.*	Concession & Qualification anticipate counterarguments admit what is right about them get back on your topic

The Project „STRATOS“ in Utah will be the world‘s biggest AI data Center.
With more than 16000 hectares and 9 Gigawatt of power

Claim: The proposed Stratos data center in Box Elder County will seriously harm the local climate and ecosystem by pumping huge amounts of waste heat into a narrow valley.

Evidence: Plans call for about 9 GW of power and roughly 7–8 GW of waste heat, which researchers say equals the daily heat of roundabout 23 atomic bombs.

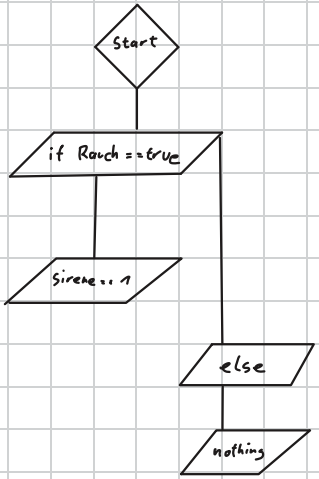

Warrant: When that much continuous heat is released into a bowl-shaped valley, it can trap warm air and disturb normal night cooling and moisture cycles.

Backing: Scientists warn this could damage soil crusts, harm species, increase invasive plants and enhance the fire risk.

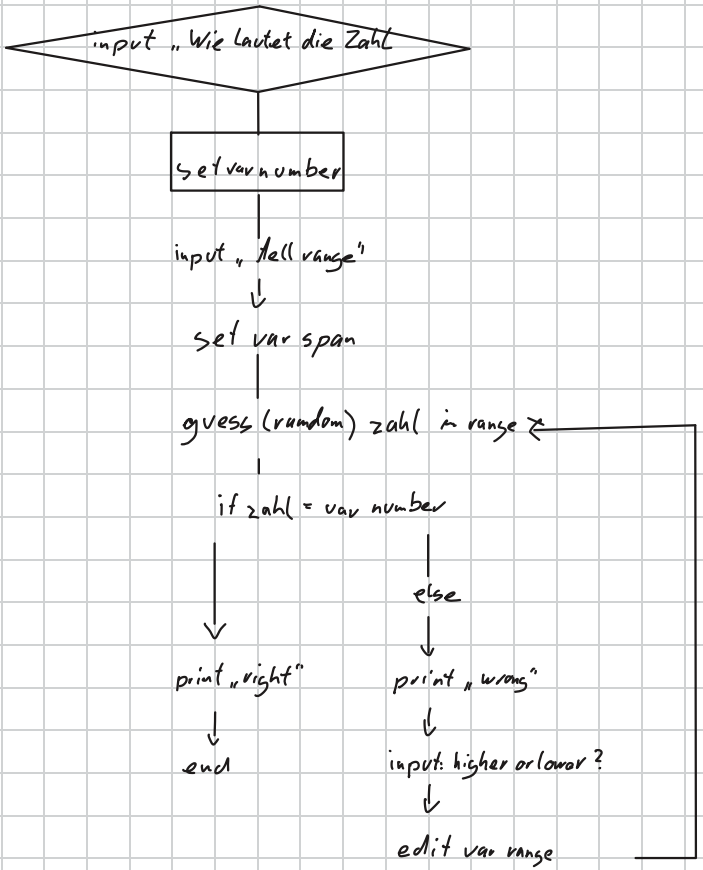

Rebuttal: Developers say tech and cleaner power can fix this, but the scale and local geography make those fixes not appropriate to fully prevent harm without much stricter safeguards and transparent plans.

Concession missing…
